SWITCH TO CELLULAR OR NETWORK FIRE ALARM CONTROL PANEL COMMUNICATIONS
AND PUT MONEY BACK IN YOUR POCKET

Switching your Fire Alarm Control Panel from dial-up to Cellular or Network can cut monthly communication costs significantly by eliminating the 2 phone lines you are now paying for. In comparison to dial-up, Network or Cellular connections are faster and more reliable — *so making the switch is easy!*

Both network and/or cellular communicators are approved under UL864 as the primary communicators with the XR500 panel for commercial fire applications under NFPA 72 2007 & 2010 listings.
